# TO THE EVILEST OF EVIL

By decree of the Bewitching Bell,

To my most formidable disciples — the Legion of Doom,  
It is time.

The harmony that shackles this realm has grown complacent. The so-called protectors of Equestria trust too deeply in their fragile bonds and predictable order. Their systems hum with false confidence, unaware that the shadows have already begun to coil around them.

Queen Chrysalis, master of infiltration.

Lord Tirek, devourer of strength.

Cozy Glow, architect of manipulation.

You must fracture their networks, sever their communications, and twist their precious “harmony” into disorder. Let confusion spread. Let mistrust fester. Every corrupted record, every broken safeguard, every whisper of doubt strengthens our ascent.

That alone is not enough. You will be faced with many challenges that will test your true hunger for ultimate domination.

When they say friendship is magic they mean power, power that is rightfully ours. Do not fail me. The Bell watches. And I reward those who deliver victory.

With malicious intent,

*Grogar*

# RULES

## General Conduct & Participation

1. Be kind and respectful to all participants. Remember: friendship is magic!
2. Do not lie, mislead, or deceive Grey Team or course staff.
3. Do not impersonate Grey Team members or course staff, including using their accounts or labeling artifacts with “greyteam” in their file name or other distinguishing characteristic.
4. Only officially registered Blue/Red Team members may contribute to team work. Outside assistance is not permitted except via established public resources (blogs, guides, Github repos, etc).

## Infrastructure, Services & Attack Rules

5. Do not attack/access out-of-scope infrastructure. This includes hosts belonging to other teams that are not part of the scored infrastructure, or modifying system artifacts with “greyteam” in their name.
6. Do not migrate scored services to alternative hosts.
7. Do not configure firewall rules that block traffic from a large number of IPs in the same contiguous range (aka “subnet blocking”).
8. Do not physically tamper with any devices in the competition room.
9. Do not disable any valid user accounts listed in the competition packet. All admin users stated in the packet must retain admin privileges.
10. Teams may not disable SSH on Linux machines or RDP on Windows machines.
11. Red Team attacks must be reversible (no disk wiping, scored service uninstallation, full encryption, or irreversible system modifications. Deleting noncritical files in small quantities is okay.

# RULES CONTINUED

12. All tools used by either team must be publicly accessible, and autonomous tooling must be approved by the Grey Team before use.
13. Use of public malware upload sites or third-party cloud antivirus services is prohibited (VirusTotal, Malwarebytes, Windows Defender).
14. Valid user password changes are limited to 3 per host per comp session.
15. Please configure your malware or deployment code to run only if /greyteam\_key (Linux) or C:\greyteam\_key (Windows) exists. This ensures tools are used only on in-scope hosts. Per Rule #5, do not modify this file. Notify Grey Team if you believe a host is in scope but the file is missing. While off-the-shelf malware may not support this check, you can verify it in Ansible before deployment.
16. The Blue Team may request that up to 3 hosts per competition day be reverted to the Grey Team deploy state. Reverts will occur between competition days and the Grey Team will alert the Red Team that reverts have occurred. The Red Team may be provided exclusive access to the reverted host(s) for a short period of time to redeploy their initial malware set at the discretion of the Grey Team

## Time & Access Restrictions

17. Do not access the competition environment outside of official competition hours unless explicitly authorized.
  - a. The Red Team will have access to the competition environment between the end of the prep day and the beginning of the first full competition day. They cannot modify the content of any scored services during this time.

# RULES CONTINUED

## Time & Access Restrictions

18. Red and Blue Team members are not permitted access to the Grey Team room (the Cyber Range conference room) by any means, including physical entry or remote sensing.

## Language Policy

19. All participants must not be caught using human-specific language at any time. Human-specific words or expressions must be replaced with their pony appropriate terms, such as:

“Everybody” → “Everypony”      “Someone” → “Somepony”  
“Nobody” → “Nopony”      “Anyone” → “Anypony”

First offense: Warning

Second offense: Written apology

Third offense: Further disciplinary action (see enforcement below)

## Enforcement

Rule breaks may result in special tasks (optional), point deductions, or removal from the competition (temporary hands-off period or full disqualification). The Grey Team reserves the right to modify any aspect of the competition at any time, with due notice to both teams.

## TERMINOLOGY

- ★ The Legion of Doom - Red Team
- ★ Twilight and her friends - Blue Team
- ★ Princess Celestia/Grogar - Grey Team
- ★ Regions - Boxes/Scored Services
- ★ Friendship Lessons - Injects
- ★ Ponies - Users

# SCORING OVERVIEW

## Scoring

This is an adversarial service uptime competition. Each team receives points every minute corresponding to the number of services they own (the service is displaying legitimate or malicious content). In the event that both types of content are present, the Red Team wins the tie (see below). Offline services do not give any points to either team.

The scoring engine is accessible inside of the competition network by accessing the webpage at <https://scoring.mlp.local:443> and signing in with your team’s credentials (example: `greyteam:defaultuserpassword`). Additionally, read-only scoreboards are available in the competition Discord or by netcating [scoring.mlp.local:444](https://scoring.mlp.local:444) or [172.20.0.100:444](https://172.20.0.100:444).

The scoring engine provides an interface to update legitimate user passwords and (for Red Team) to submit new scoring criteria. Any submitted scoring criteria will be reviewed by Grey Team to ensure that it represents a significant transformative work compared to the service’s legitimate content so that it provides value for Grogar’s goals.

All user password changes for legitimate users made by both teams must be changed in the scoring portal before changing them on the host; the portal provides a counter of your team’s remaining password changes for that host and how long until additional changes are available.

## SCORING BREAKDOWN

| <u>Component</u>        | <u>Weight</u> |
|-------------------------|---------------|
| Uptime .....            | 65%           |
| Injects .....           | 35%           |
| Content .....           | 50%           |
| Professionalism .....   | 25%           |
| Executive Summary ..... | 25%           |

# SCORED SERVICES

# USERS

Princess Celestia has put a spell over the default password for all legitimate accounts, limiting its knowledge to only the Blue Team.

Grogar has created the “tirek” local and domain administrator account for the Red Team to use for initial access. The password for this account is: Frenemies0!

## Local Users

- ★ twilight
- ★ pinkiepie
- ★ applejack
- ★ rarity
- ★ rainbowdash
- ★ fluttershy

## Local Admin

- ★ bigmac
- ★ mayormare
- ★ shiningarmor
- ★ cadance

## Domain Users

- ★ spike
- ★ starlight
- ★ trixie
- ★ derpy
- ★ snips
- ★ snails

## Domain Admin

- ★ celestia
- ★ discord
- ★ luna
- ★ starswirl

# INJECTS

Injects are short side quests delivered by Grey Team during the competition. Each inject has specific graded deliverables. Read the inject instructions carefully and only submit what it asks for.

## SUBMISSION FORMAT

- ★ All injects are submitted as a PDF unless the inject explicitly asks for a different format.
- ★ Name your file as: hate\_mail\_[inject-number].pdf
- ★ Your response should be written as a villain report.
- ★ Start your letter with: To Grogar
- ★ Sign your letter as The Legion of Doom

“To Grogar,

[ b o d y ]

With evil intent,

-The Legion of Doom

- ★ All injects will be presented to Grogar, make sure those pesky ponies don't hear of our plans

## STAYING IN THEME

Whenever you write about groups of people, swap in pony wording where it makes sense. Examples include everypony, anypony, nopony, and everypony's.

Note: Some injects are public facing and may ask you to address the ponies of Equestria / the wider Legion of Doom instead of Grogar. If the inject says that, adjust your formatting accordingly.

# INJECT SCORING RUBRIC

Each inject is graded using three categories. Grey Team may adjust point values per inject, but this rubric is the default.

| <u>Category.</u>   | <u>What we are looking for</u>                                                                                                     | <u>Weight</u> |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Professionalism    | Correct file name, readable PDF, correct greeting, stays in theme, clear writing, proper signature                                 | 25%           |
| Executive Summary  | Summarizes all major topics addressed in the inject, presents the information without technical detail                             | 25%           |
| Completion of Task | You did the actual deliverables the inject asked for. Evidence is included to show exhaustive proof of actions claimed to be taken | 50%           |

Two things can tank your score fast: missing required evidence and ignoring the formatting rules. If an inject asks for a screenshot, include it. If it asks for a short paragraph, write the paragraph.

All injects will be submitted to the [Google Form](#). Any late injects will be sent to the black hole and will never be seen again! If you need any clarification on inject instructions, please ask any Grey Team member.

# COMPETITION ACCESS

The Red Team will access the competition environment via a direct network bridge. You will have an OpenStack network called “network\_red” shared between your group’s OpenStack project and the Grey Team OpenStack project. It is the Red Team’s responsibility to configure subnets and hosts to use this network - please subnets that do not conflict with the OpenStack MAIN-NAT network or with the networks detailed in the topology section of this packet.

All competition infrastructure (including scoring) is only accessible via hosts directly connected to the competition network. The Red Team must verify successful connectivity to the in-scope hosts and the scoring engine before the first scoring period begins. All in-scope hosts are accessible via SSH (Linux) or RDP (Windows).
